

Evonik Degussa GmbH

At the upcoming CIAMI 2010 in Shanghai, Evonik High Performance Polymers will display our products, service and solutions towards plastics industry, furthermore, applications of our products in the automotive, medical technology, optics and optoelectronics, sports and leisure, household appliance, telecommunications and electronics, and construction and lighting industries.

We have been producing polyamide 12, polyamide 612, and polyamide 12 elastomer molding compounds (PEBA) under the VESTAMID® brand name for about 40 years and, more recently, high-temperature PPA and polyamides based on renewable raw materials. The product range includes, moreover, TROGAMID® transparent specialty polyamides, the PA 12 powders VESTOSINT® and the VESTAMELT® copolyamide hot-melt adhesives. With its VESTAKEEP® polyether ether ketone, the business line has penetrated the segment of high-performance polymers, which must satisfy extremely stringent mechanical, thermal, and chemical requirements.

We aim at continual innovation and advanced technological development, whose products range almost covers all the specialized injection and extrusion compounds. We will launch a series of new specialty engineering plastics —— bio-based VESTAMID® HTplus and VESTAMID® Terra.

1. Lenses and frames made of the specialty transparent polyamide TROGAMID® CX

2. VESTAMID® HTplus products applying in electronics industry

3. Use of Evonik's new plastic charge air duct made by VESTAMID® HTplus in the engine of the Lotus racing car
